

Microwave

2186/87 5 & 20 GHz Programmable Attenuators

AEROFLEX
A passion for performance.

Wide range GPIB programmable attenuator with outstanding accuracy for bench top, automatic and standards applications

- Attenuation from 0 to 130 dB
- 1 dB steps
- DC to 20 GHz frequency range (2187)
- 1 W power rating (50 W pulsed)
- IEEE-488.2 interface fitted as standard
- External relay driving capability
- Calibration data to international standards
- User calibration facility

The 2186 and 2187 are microwave attenuators covering the frequency range DC to 5 GHz (2186) and DC to 20 GHz (2187) with an attenuation range of 0 to 130 dB in 1 dB steps.

Microprocessor control provides simple and rapid operation either by direct keyboard operation or via the IEEE-488.2 interface which is fitted as standard.

The 2186 and 2187 are ideally suited to ATE applications with rear panel input and output versions available as options.

Calibration Data to International Standards

Calibration data, traceable to international standards, are internally stored for each attenuator element as a function of frequency, allowing attenuation settings to be corrected to achieve increased accuracy.

At the specified frequency the actual attenuation is calculated and can be displayed or read over the GPIB interface. A corrected attenuation mode can be used which results in the instrument selecting the setting closest to the required attenuation value.

User Calibration

User calibration data for each attenuator element can be stored in non-volatile memory and the information used to reduce test system uncertainties. For calibration and test purposes individual pads of the attenuator can be controlled.

Programming

An IEEE-488.2 program interface is provided as standard. Ease of use is ensured by careful selection of mnemonics. For example if attenuation, frequency and step size are to be set to 45 dB, 2.7 GHz and 5 dB respectively and one upward step in attenuation is required then the GPIB message is:-

```
ATTN 45DB;FREQ 2.7GHZ;STEP
```

```
5.0DB;ATUP<EOM>
```

Relay Driving

A programmable auxiliary output on the rear panel provides a facility for driving relays commonly used in ATE systems for switching signal paths. A total of 16 control lines, each capable of sinking 0.5 A, are provided - saving the cost and additional complexity of a separate switch controller. The outputs can be configured for static or pulsed operation to allow the lines to be used with biased or bistable switches.
